SMALL GRANTS PROGRAMME RESULTS REPORT (FY 2017-2023)

GABON

COUNTRY REPORT CARD

FY 2017-2023

PORTFOLIO PROFILE SINCE INCEPTION

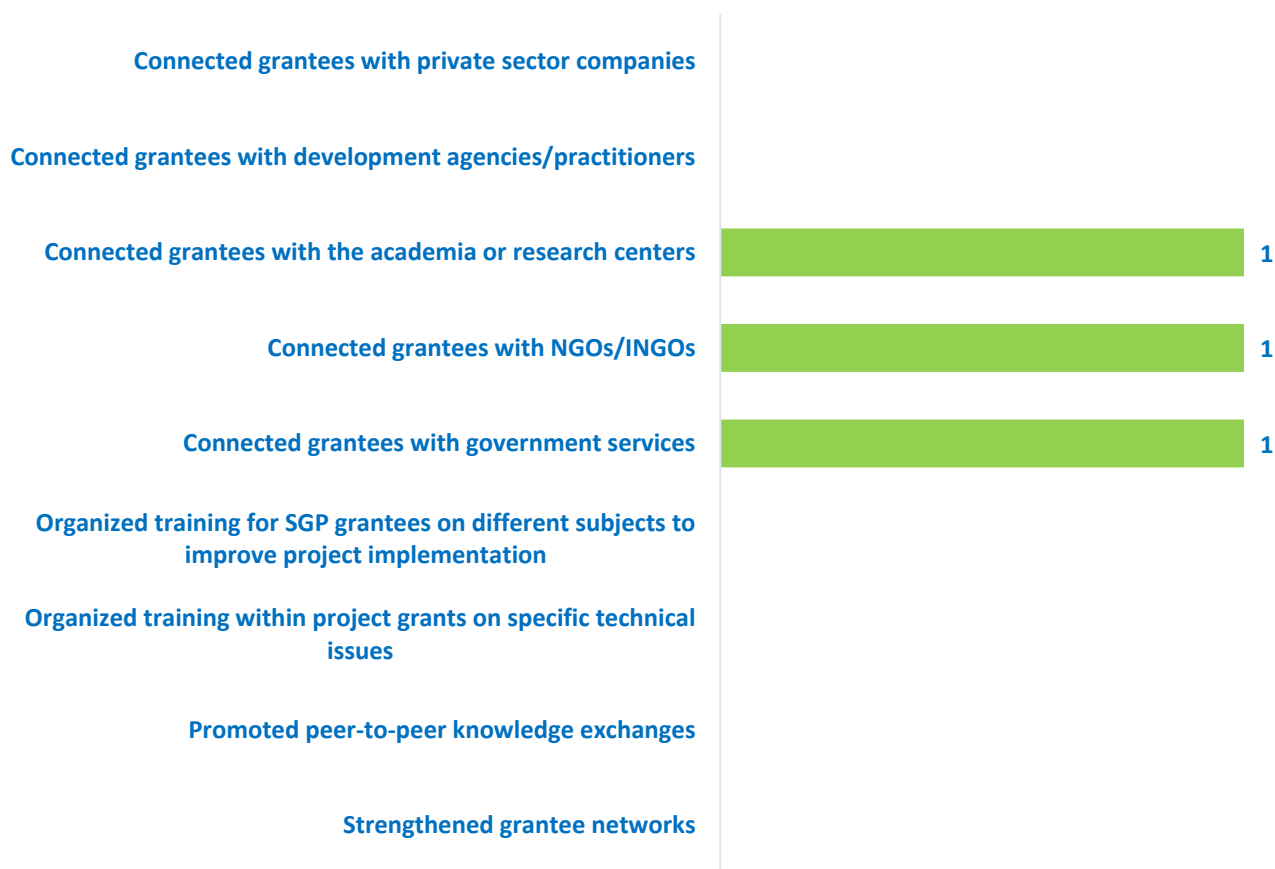

Country Programme Name	Gabon		
Year Started	2021		
	GEF	Non-GEF	Total
Number of projects	17	-	17
Grant amount committed	436,000	-	436,000
Project level co-financing in cash	135,633	-	135,633
Project level co-financing in kind	200,542	-	200,542
Total co-financing *	336,175		
<p><small>Source: SGP database as of 2023</small></p> <p><small>* Total co-financing = Total project level co-financing (in cash and in kind) + Non-GEF grant amount committed</small></p>			

	July 2022 - June 2023	Total Value 2016 - 2023 **
** Kindly note the total values 2016-2023 have undergone comprehensive quality assurance that supports aggregation of results over time. This includes removal of duplicative data over time and/or inclusion of more results based on verification by SGP country teams.		
GRANTMAKER PLUS		
Gender		
Programme Management: NSC gender focal point (yes/no)	Yes	1
Indigenous Peoples		
Number of indigenous leaders with improved capacities	2	2
Programme Management: NSC IP focal point (yes/no)	Yes	1
Ways to encourage IP projects		
Involved indigenous peoples in NSC and/or TAG (yes/no)	Yes	1
Youth		
Programme Management: NSC youth focal point (yes/no)	Yes	1
PROGRAMME MANAGEMENT		
National Steering Committee		
Number of NSC meetings occurred during the reporting period	5	5
Average number of NSC members that participated in each NSC meeting	7	7

GRAPHICAL REPRESENTATION OF KEY RESULTS

Interpreting the Green Bars in Graphs: The presence of green bars indicates the number of years that the country programme has achieved specific results. If a green bar is absent, it signifies that while the associated result is not observed in the country programme, it is still evident in the overall aggregated SGP portfolio.

Number of Years Country Programme Deployed Capacity Development Strategies (Over 7-year reporting period from 2017-2023)

Source: Annual Monitoring Report 2017-2023

**Number of Years Country Programme Addressed Sustainable Development Goals
(Over 7-year reporting period from 2017-2023)**

METHODOLOGICAL BASIS OF COUNTRY REPORT

- Results aggregations over time are only for completed projects.
- With SGP's rolling modality, results reflect all ongoing operational phases during the indicated period. Please refer to the total projects completed on the first page for information in this regard.
- The source of reported results is the annual monitoring process, which is part of the annual monitoring requirements for each country programme. Additionally, evaluative evidence sources have also been leveraged, if available for the country programme.
- This results report benefits from extensive quality assurance. All information across all countries in the portfolio is harmonized, verified, and evidenced before being reported. Several layers of this quality assurance have been implemented in the generation of this report and there are no result duplications across years. This point is important not only for a specific unit of measurement (i.e., indicator selected) but also for results aggregation across years in a given operational phase. Reported results include both direct and indirect global-environmental and socio-economic benefits. This is due to SGP's work in two key areas:
 - SGP works towards behavioural change at individual, organizational, and community levels. Social determinants that shape human interaction with the environment play an important role, especially at the community level, as sustainability and the continuation of environmental gains often depend on them. These factors include positive shifts in knowledge, attitudes, practices, social and cultural norms, and conventions. Such interventions shape not only demand but also communication between community leaders and other influencers in promoting the adoption of environmentally friendly behaviours and practices. Often, SGP projects have ripple effects that go well beyond the direct scope of the project, emphasizing the importance of measuring indirect impact.
 - Encouraging Community Action for Environmental Change. For many years, SGP has focused on promoting and supporting local community groups to bring about broader and sustainable environmental change. This approach is a key aspect of SGP's work and recognizes the power of motivated community groups to create significant impact and drive positive transformation. Community group action refers to informal gatherings of individuals and organizations in the community who share a common belief and purpose. It involves taking practical steps over time to address environmental and socioeconomic challenges and creating positive change. This grassroots-level approach relies on the active involvement and empowerment of the community, with the initial efforts acting as a catalyst for further mobilization. By encouraging self-governance and involving those most affected by the issues, community action can extend its influence to more people in the community, underscoring the importance of measuring indirect impact.
