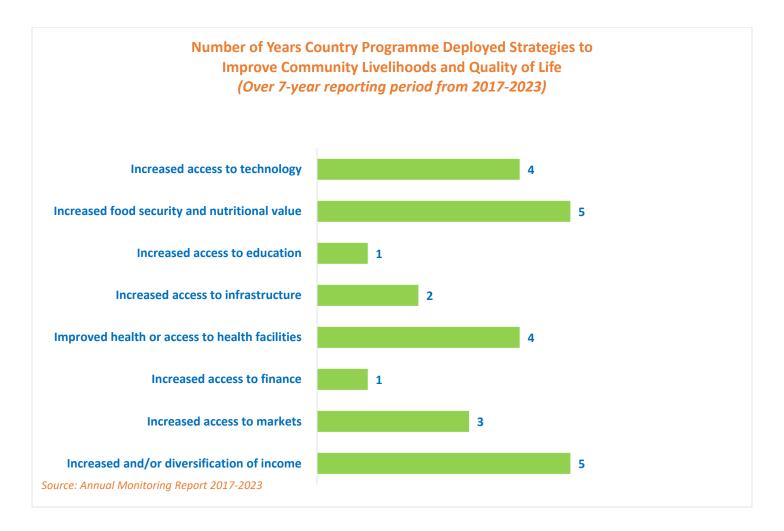

GRAPHICAL REPRESENTATION OF KEY RESULTS

Interpreting the Green Bars in Graphs: The presence of green bars indicates the number of years that the country programme has achieved specific results. If a green bar is absent, it signifies that while the associated result is not observed in the country programme, it is still evident in the overall aggregated SGP portfolio.

Number of Years Country Programme Deployed Gender Mainsreaming Strategies (Over 7-year reporting period from 2017-2023)

Number of Years Country Programme Addressed Sustainable Development Goals (Over 7-year reporting period from 2017-2023)

EXAMPLES OF PROJECT RESULTS

Climate Change

SGP **Tanzania** partnered with the national government, UNIDO and other partners leveraging funding to invest in a mini hydropower project which was implemented by *People's Alliance for Social and Environmental Protection*. The micro hydro power plant has generated 68kWh of power, benefitting 1,145 people (612 females and 533 males) in 247 households, reducing the indoor pollution caused by paraffin lamps and eliminating the need for wood collection. 15 public institutions were powered by the plant, including schools, health centers, churches and village administration offices. In schools, access to electricity enabled the children to extend study hours and health centers to store vaccines and provide a wider array of services. The project also positively affected youth employment, enabling young people to engage in entrepreneurial activity including barber shops, tailoring, agro-processing, carpentry and others.

Sound technical assessment including environmental impact, climate assessment and mitigation of negative effects was key to project success. To ensure sustainability, a community organization has been set up to ensure smooth technical, financial and social operation and maintenance of the facility. The user fee for consumers was much lower than the tax on electricity consumers of the state power company in Tanzania. The project contributed to the achievement of multiple SDGs and has avoided 15,369 kg of CO₂ per year. At the national policy level, the project has informed the government policy by establishing feasibility and conditions for establishing mini-grids in remote areas. (Source: Annual Monitoring Report, 2018-2019)

International Waters

SGP Tanzania supported the East African Communities Organization for Management of Lake Victoria Resources Tanzania Chapter to implement a project as a consolidation phase of an earlier supported project on integrated aquaculture and natural resource management on the shores of Lake Victoria. The project is located at Namagondo Village, Ukerewe District in Mwanza. The consolidation phase includes the following activities: integrating fish farming and poultry keeping to promote sustainable business practices; promoting agri-business to fish farming; blending fish farming and solar technology; introducing fish feeds production line for fish ponds and sale of surplus to other farmers; producing catfish on land as fishing bait with the view to conserve in-lake catfish. The project has solved the problem of non-availability of fish feeds in the local area and become a training center on fish farming enterprises for farmers in the district. Over 200 fish farmers who have been trained at the center now generate up to \$300 per month each, which is addressing income poverty in the area. Further replication of this project will solve the problem of overfishing in Lake Victoria. (Source: Annual Monitoring Report, 2018-2019)

CSO-Government Dialogue

In Guatemala, Jamaica, Haiti, Morocco, Moldova, Niger, **Tanzania**, and Thailand, the dialogues were timed around global conventions and events such as UNFCCC and UNCCD COPs and aimed to help local communities, CSOs, indigenous people and other SGP constituents to meaningfully participate at the critical time as country positions were being developed. *(Source: Annual Monitoring Report, 2016-2017)*

Social Inclusion – Indigenous Peoples

In **Tanzania**, SGP supported grantee, Ujamaa Community Resource Trust (UCRT), to build the capacity of local pastoralists by strengthening existing community-based governance institutions such as village councils, and linking conservation of natural resources and community livelihoods through establishment of tourism enterprises, for the sustainable management of the Lake Natron ecosystem. Lake Natron in Northern Tanzania is one of the world's top tourism destinations and a Ramsar site due to its diverse terrestrial wildlife populations and spectacular landscapes. The indigenous Pastoralists Masai have lived around Lake Natron for hundreds of years and the lake ecosystem supports high value of natural resources, including wildlife, forests and water resources. Over recent years, pastoral livelihoods system has been faced with serious land use changes, threatening Lake Natron biodiversity. The project supported the Indigenous Communities in

conserving the Lake Natron ecosystem by strengthening the observation of conservation by-laws. It supported the Indigenous communities to develop a Tourism Management Plan to control and regulate the volume of tourism around the Lake in collaboration with conservation authorities. In addition, the Village Natural Resources Management Committee has been revived to facilitate Natural Resources Management oversight at the local level. The project was successful in increasing the incomes of over 100 youth and women through cultural tourism, eco-tourism and tour guide operations. (Source: Annual Monitoring Report, 2019-2020)

Social Inclusion – Persons with Disabilities

In Tanzania, SGP grantee Community-based Rehabilitation in Tanzania (CCBRT) is the largest indigenous provider of disability and rehabilitation services in the country, running hospital services in Dar es Salaam where every year, about 120,000 adults and children with disabilities and their caregivers achieve a better quality of life. In the absence of a reliable national grid, CCBRT strengthened work on alternative environmentally friendly and reliable sources of electricity, water heating systems and water supply at its disability hospital. With SGP support on implementation of solar technologies, results included facilitation of smooth running of day-to-day functions and minimizing of damage to vital equipment and water pumps. This specifically entailed: improvement of operation theatre services; lighting in wards in case of regular power outage; water heating for laundry and bathrooms with constant supply of high-quality water by harvesting rainwater as fallback facility in case of low supply. Other attributable results include provision of alternative light solutions to families through the distribution of solar lamps to disadvantaged children who are treated at CCBRT, and contribution to reducing pollution and wasteful practices that were demonstrated to other stakeholders for wider adoption. (Source: Annual Monitoring Report, 2016-2017)

In **Tanzania**, SGP supported a youth group for increased access to technology for women and persons with disabilities. With the establishment of *Tanzania Youth Environment Network* (TAYEN), SGP supported installation of solar home lighting systems in a village called MaloloB in Kilosa District. The project targeted 40 households as beneficiaries headed by the elderly widows and persons with disabilities. To ensure the sustainability of project results, 20 youths were given technical training for maintenance and repair of the solar home systems. The project increased the quality of life of the vulnerable group by providing a low carbon energy source. In addition, the project supported job creation and technical skills for 20 youths who acquired skills to repair solar home systems. While they do not charge a fee for the project beneficiaries, the skillset serves as a source of regular income for their livelihoods outside the project and the solar lighting system has been replicated beyond the project areas. (*Source: Annual Monitoring Report, 2018-2019*)

Recovery from COVID-19

In **Tanzania**, a project led by *Arusha NGO Network* was a proactive response to the challenges posed by the COVID-19 pandemic. The *Ngorongoro Conservation Area (NCA)*, spanning 809,440 hectares, encompasses diverse landscapes. It serves both as a conservation area and home to approximately 70,000 people living within or near its boundaries. A majority of these inhabitants are indigenous and rely heavily on tourism and pastoralism for their livelihoods. Unfortunately, the COVID-19 pandemic dealt a severe blow to tourism, compelling the local population to explore alternative means of survival, including tapping into forest and wildlife resources.

To address these challenges, the project took a participatory approach, involving a wide range of stakeholders, from local communities and community-based organizations (CBOs) to business entities and government officials at both central and local levels. Stakeholder meetings and baseline surveys were conducted to pinpoint the specific needs of various sectors like eco-tourism, natural conservation, community enterprises, and agri-business. The project identified 10 community enterprises that had suffered setbacks due to COVID-19 and focused on enhancing knowledge and skills in business management, particularly in the context of eco-tourism opportunities. Through targeted training and capacity support, these enterprises were empowered to rebound and thrive. 10 business plans were developed, along with two-year detailed budgets for the community business entities, which not only acted as strategies for recovery from the shocks of COVID-19 but also paved the way for sustained economic development within the community. 10 community-owned enterprises were established for

alternative income generation and sustainable livelihoods, among which seven were led by women. In addition, the capacity of community conservation committees was strengthened to prevent the illegal exploitation of natural resources. Farming and livestock activities in NCA-adjacent local communities were strengthened, with the aim of relieving pressure off the two forests. (Source: Annual Monitoring Report, 2022-2023)

ALIGNMENT OF OP7 COUNTRY PROGRAMME STRATEGY WITH NATIONAL PRIORITIES

During OP6 UNDP continued to be aligned with various International Conventions that support environmental and biodiversity conservation including issues of Climate Change and Variability towards attaining Sustainable Development Goals. In addition, OP6 was also aligned with various relevant national/ regional agreements. The table below provides a highlight of the relevant conventions as well as regional/national plans.

List of relevant conventions and national/regional plans or programmes:

Rio Conventions + national planning frameworks	Date of ratification/completion
GEF 7 National Dialogue	14 – 15/1/2019
UN Convention on Biological Diversity (CBD)	08/03/1996
CBD National Biodiversity Strategy and Action Plan (NBSAP)	01/03/1996
Nagoya Protocol on Access and Benefit-Sharing (ABS)	19 th April 2018
UN Framework Convention on Climate Change (UNFCCC)	17/04/1996
UNFCCC National Communications (1st, 2nd, 3rd)	4 th July 2003
UNFCCC Nationally Appropriate Mitigation Actions (NAMA)	8 th November 2015
UNFCCC National Adaptation Plans of Action (NAPA)	2007
Nationally Determined Contributions (NDCs) for Paris Accord	-
UN Convention to Combat Desertification (UNCCD)	19/06/1997
UNCCD National Action Programmes (NAP)	August, 1999
Stockholm Convention on Persistent Organic Pollutants (POPs)	30/04/2004
SC National Implementation Plan (NIP)	May, 2004
Minamata Convention (MC) on Mercury	November 2019
UN 2030 Sustainable Development Goals (SDGs)	September 2017
Voluntary National Reviews (VNR) for the UN SDGs	26 June 2019
Strategic Action Programmes (SAPs) for shared international	12/06/2003
water-bodies3	12,00,2003
Paris Agreement	18/05/2018
Kyoto Protocol	August 2002
Convention to Combat Desertification (CCD)	June 1994

UNDP-implemented Small Grants Programme is delivering integrated results at the country level supporting local level capacities aligned with multiple Multilateral Environmental Conventions. This includes support to work for CBD National Biodiversity Strategy and Action Plan (NBSAP), UNFCCC Nationally Determined Contributions (NDCs), Nationally Appropriate Mitigation Actions (NAMA) and National Adaptation Plans of Action (NAPA), UNCCD National Action Programmes (NAP), and localization of Sustainable Development Goals, amongst many others.

METHODOLOGICAL BASIS OF COUNTRY REPORT

- Results aggregations over time are only for completed projects.
- With SGP's rolling modality, results reflect all ongoing operational phases during the indicated period. Please refer to the total projects completed on the first page for information in this regard.
- The source of reported results is the annual monitoring process, which is part of the annual monitoring requirements for each country programme.

 Additionally, evaluative evidence sources have also been leveraged, if available for the country programme.
- This results report benefits from extensive quality assurance. All information across all countries in the portfolio is harmonized, verified, and evidenced before being reported. Several layers of this quality assurance have been implemented in the generation of this report and there are no result duplications across years. This point is important not only for a specific unit of measurement (i.e., indicator selected) but also for results aggregation across years in a given operational phase. Reported results include both direct and indirect global-environmental and socio-economic benefits. This is due to SGP's work in two key areas:
 - SGP works towards behavioural change at individual, organizational, and community levels. Social determinants that shape human interaction with the environment play an important role, especially at the community level, as sustainability and the continuation of environmental gains often depend on them. These factors include positive shifts in knowledge, attitudes, practices, social and cultural norms, and conventions. Such interventions shape not only demand but also communication between community leaders and other influencers in promoting the adoption of environmentally friendly behaviours and practices. Often, SGP projects have ripple effects that go well beyond the direct scope of the project, emphasizing the importance of measuring indirect impact.
 - o Encouraging Community Action for Environmental Change. For many years, SGP has focused on promoting and supporting local community groups to bring about broader and sustainable environmental change. This approach is a key aspect of SGP's work and recognizes the power of motivated community groups to create significant impact and drive positive transformation. Community group action refers to informal gatherings of individuals and organizations in the community who share a common belief and purpose. It involves taking practical steps over time to address environmental and socioeconomic challenges and creating positive change. This grassroots-level approach relies on the active involvement and empowerment of the community, with the initial efforts acting as a catalyst for further mobilization. By encouraging self-governance and involving those most affected by the issues, community action can extend its influence to more people in the community, underscoring the importance of measuring indirect impact.
