# WHAT IS RECYCLING ?

Recycling is the process of collecting and processing materials that would otherwise be thrown away as trash and turning them into new products. Recycling can benefit your community, the economy, and the environment.

## WHY RECYCLE ?

Recycling conserves natural resources, saves energy, reduces pollution, and helps combat climate change. It's an easy way to make a positive impact on the environment.

✔ Yes! Recycle these

ALUMINUM & STEEL CANS - PAPER & CARDBOARD - PLASTIC BOTTLES, BINS & TUBS - GLASS BOTTLES & JARS - CARTONS

✘ Never place these in the recycling container.

NO BAGGED ITEMS - NO PLASTIC BAGS - NO FOOD WASTE - NO STYROFOAM - NO ELECTRONICS OR BATTERIES

## WHAT CAN BE RECYCLED ?

- Paper: Newspapers, magazines, cardboard
- Plastics: Bottles, containers, packaging
- Metals: Aluminum cans, tin cans
- Glass: Bottles, jars
- E-Waste: Old electronics, batteries

## THREE RS OF WASTE MANAGEMENT

Exploring the three Rs of waste management — Reduce, Reuse, Recycle. In order to keep as much material out of the landfill as possible, it's important for each of us to do our part. One of the ways to put that plan into action is through the 3 Rs of waste management — Reduce, Reuse, Recycle.

Reducing is simply creating less waste. It's the best method for keeping the environment clean, so it's the first of the 3 Rs. By reducing, you stop the problem at the source. Making less waste to begin with means there's less waste to clean up.

Reusing is taking old or unwanted items you might otherwise throw away and finding a new use for them. There are all sorts of ways you can reuse items to help reduce your trash footprint

Recycling is the last — and most commonly used — of the 3 Rs. Recycling is changing discarded materials into new products in order to avoid using more virgin resources.

## RECYCLING AS A TOOL FOR SUSTAINABILITY

Conservation of natural resources

By recycling plastic, we reduce the need for extracting and processing raw materials, such as petroleum or natural gas.

Energy savings

Recycling plastic requires less energy compared to producing new plastic from scratch, resulting in a reduction in greenhouse gas emissions

Waste reduction

Recycling diverts plastic waste from landfills and incineration, reducing the burden on waste management systems.
